Heart-healthy diet: 8 steps to prevent heart disease

Changing your eating habits can be tough. Start with these eight strategies to kick-start your way toward a heart-healthy diet.

By Mayo Clinic staff

Although you might know eating certain foods can increase your heart disease risk, it's often tough to change your eating habits. Whether you have years of unhealthy eating under your belt or you simply want to fine-tune your diet, here are eight heart-healthy diet tips. Once you know which foods to eat more of and which foods to limit, you'll be on your way toward a heart-healthy diet.

1. Limit unhealthy fats and cholesterol

Of the possible changes, limiting how much saturated and trans fats you eat is the most important step you can take to reduce your blood cholesterol and lower your risk of coronary artery disease. A high blood cholesterol level can lead to a buildup of plaques in your arteries, called atherosclerosis, which can increase your risk of heart attack and stroke.

The American Heart Association offers these guidelines for how much fat and cholesterol to include in a heart-healthy diet:

| Type of fat | Recommendation |
|---------------|---|
| Saturated fat | Less than 7 percent of your total daily calories |
| Trans fat | Less than 1 percent of your total daily calories |
| Cholesterol | Less than 300 milligrams a day for healthy adults; less than 200 milligrams a day for adults with high levels of low-density lipoprotein (LDL), or "bad," cholesterol or those who are taking cholesterol-lowering medication |

The best way to reduce saturated and trans fats in your diet is to limit the amount of solid fats — butter, margarine and shortening — you add to food when cooking and serving. You can also reduce the amount of saturated fat in your diet by trimming fat off your meat or choosing lean meats with less than 10 percent fat.

You can also use low-fat substitutions when possible for a heart-healthy diet. For example, top your baked potato with salsa or low-fat yogurt rather than butter, or use low-sugar fruit spread on your toast instead of margarine.

You may also want to check the food labels of some cookies, crackers and chips. Many of these snacks — even those labeled "reduced fat" — may be made with oils containing trans fats. One clue that a food has some trans fat in it is the phrase "partially hydrogenated" in the ingredient list.

When you do use fats, choose monounsaturated fats, such as olive oil or canola oil. Polyunsaturated fats, found in nuts and seeds, also are good choices for a heart-healthy diet. When used in place of saturated fat, monounsaturated and polyunsaturated fats may help lower your total blood cholesterol. But moderation is essential. All types of fat are high in calories.

Fats to choose

- Olive oil
- Canola oil
- Margarine that's free of trans fats
- Cholesterol-lowering margarine, such as Benecol, Promise activ or Smart Balance

Fats to limit

- Butter
- Lard
- Bacon fat
- Gravy
- Cream sauce
- Nondairy creamers
- Hydrogenated margarine and shortening
- Cocoa butter, found in chocolate
- Coconut, palm, cottonseed and palm-kernel oils

2. Choose low-fat protein sources

Lean meat, poultry and fish, low-fat dairy products, and egg whites or egg substitutes are some of your best sources of protein. But be careful to choose lower fat options, such as skim milk rather than whole milk and skinless chicken breasts rather than fried chicken patties.

Fish is another good alternative to high-fat meats. And certain types of fish are heart healthy because they're rich in omega-3 fatty acids, which can lower blood fats called triglycerides. You'll find the highest amounts of omega-3 fatty acids in cold-water fish, such as salmon, mackerel and herring. Other sources are flaxseed, walnuts, soybeans and canola oil.

Legumes — beans, peas and lentils — also are good sources of protein and contain less fat and no cholesterol, making them good substitutes for meat. Substituting soy protein for animal protein — for example, a soy burger for a hamburger — will reduce your fat and cholesterol intake.

Proteins to choose

- Skim or low-fat (1 percent) milk
- Fat-free or low-fat dairy products, such as yogurt and cheese
- Egg whites or egg substitutes
- Fish, especially fatty, cold-water fish, such as salmon
- Skinless poultry
- Legumes
- Soybeans and soy products, for example, soy burgers and tofu
- Lean ground meats

Proteins to avoid

- Full-fat milk and other dairy products
- Organ meats, such as liver
- Egg yolks
- Fatty and marbled meats
- Spareribs
- Cold cuts
- Frankfurters, hot dogs and sausages
- Bacon
- Fried or breaded meats

3. Eat more vegetables and fruits

Vegetables and fruits are good sources of vitamins and minerals; they are low in calories and rich in dietary fiber. Vegetables and fruits also contain substances found in plants that may help prevent cardiovascular disease. Eating more fruits and vegetables may help you eat less high-fat foods, such as meat, cheese and snack foods.

Featuring vegetables and fruits in your diet can be easy. Keep vegetables washed and cut in your refrigerator for quick snacks. Keep fruit in a bowl in your kitchen so that you'll remember to eat it. Choose recipes that have vegetables or fruits as the main ingredient, such as vegetable stir-fry or fresh fruit mixed into salads.

Fruits and vegetables to choose

- Fresh or frozen vegetables and fruits
- Low-sodium canned vegetables
- Canned fruit packed in juice or water

Fruits and vegetables to avoid

- Coconut
- Vegetables with creamy sauces
- Fried or breaded vegetables
- Canned fruit packed in heavy syrup
- Frozen fruit with sugar added

4. Select whole grains

Whole grains are good sources of fiber and other nutrients that play a role in regulating blood pressure and heart health. You can increase the amount of whole

grains in a heart-healthy diet by making simple substitutions for refined grain products.

Another easy way to add whole grains to your diet is ground flaxseed. Flaxseeds are small brown seeds that are high in fiber and omega-3 fatty acids, which can lower your total blood cholesterol. You can grind the seeds in a coffee grinder or food processor and stir a teaspoon of them into yogurt, applesauce or hot cereal.

Grain products to choose

- Whole-wheat flour
- Whole-grain bread, preferably 100 percent whole-wheat or 100 percent whole-grain bread
- High-fiber cereal with 5 or more grams of fiber a serving
- Whole grains such as brown rice, barley and buckwheat (kasha)
- Whole-grain pasta
- Oatmeal (steel-cut or regular)
- Ground flaxseed

Grain products to avoid

- White, refined flour
 - White bread
 - Muffins
 - Frozen waffles
 - Corn bread
 - Doughnuts
 - Biscuits
 - Quick breads
 - Granola bars
 - Cakes
 - Pies
 - Egg noodles
 - Buttered popcorn
 - High-fat snack crackers
-

5. Reduce the salt in your food

Eating a lot of salt can contribute to high blood pressure, a risk factor for cardiovascular disease. Reducing the salt in your food is an important part of a heart-healthy diet. The American Heart Association recommends that healthy adults eat less than 2,300 milligrams of sodium a day (about a teaspoon).

Although reducing the amount of salt you add to food at the table or while cooking is a good first step, much of the salt you eat comes from canned or processed foods, such as soups and frozen dinners. Eating fresh foods and making your own soups and stews can reduce the amount of salt you eat. If you like the convenience of canned soups and prepared meals, look for ones with reduced sodium.

Another way to reduce the amount of salt you eat is to choose your condiments

carefully. Many condiments are available in reduced-sodium versions, and salt substitutes can add flavor to your food with less sodium.

Low-salt items to choose

- Herbs and spices
- Salt substitutes
- Reduced-salt canned soups or prepared meals
- Reduced-salt versions of condiments, such as reduced-salt soy sauce and reduced-salt ketchup

High-salt items to avoid

- Table salt
- Canned soups and prepared foods, such as frozen dinners
- Tomato juice
- Soy sauce

6. Control your portion size

In addition to knowing which foods to eat, you'll also need to know how much you should eat. Overloading your plate, taking seconds and eating until you feel stuffed can lead to eating more calories, fat and cholesterol than you should. Portions served in restaurants are often more than anyone needs. Keep track of the number of servings you eat — and use proper serving sizes — to help control your portions.

A serving size is a specific amount of food, defined by common measurements such as cups, ounces or pieces. For example, one serving of pasta is 1/2 cup, or about the size of a hockey puck. A serving of meat, fish or chicken is 2 to 3 ounces, or about the size and thickness of a deck of cards. Judging serving size is a learned skill. You may need to use measuring cups and spoons or a scale until you're comfortable with your judgment.

7. Plan ahead: Create daily menus

You know what foods to feature in your heart-healthy diet and which ones to limit. Now it's time to put your plans into action.

Create daily menus using the six strategies listed above. When selecting foods for each meal and snack, emphasize vegetables, fruits and whole grains. Choose lean protein sources and limit high-fat and salty foods. Watch your portion sizes and add variety to your menu choices. For example, if you have grilled salmon one evening, try a black bean burger the next night. This helps ensure that you'll get all of the nutrients your body needs. Variety also makes your meals and snacks more interesting.

8. Allow yourself an occasional treat

Allow yourself an indulgence every now and then. A candy bar or handful of potato chips won't derail your heart-healthy diet. But don't let it turn into an excuse for giving up on your healthy-eating plan. If overindulgence is the exception, rather than the rule, you'll balance things out over the long term. What's important is that you eat healthy foods most of the time.

Incorporate these eight tips into your life, and you'll continue to find that heart-healthy eating is both doable and enjoyable. With planning and a few simple substitutions, you can eat with your heart in mind.
